THE SIBYLS THE FIRST PROPHETESSACAAC OF MAMI WATA THE THEFT OF AFRICAN PROPHECY BY THE CATHOLIC CHURCH

From the ancient world to modern spiritual movements, the figure of the prophetess has commanded both reverence and suspicion. Across cultures, women who channeled divine messages held a unique position—priestesses, seers, oracles. Few traditions have captured the imagination as deeply as the Sibyls of Greco-Roman antiquity and the powerful water spirit Mami Wata of West and Central Africa. Yet an unsettling narrative threads through these histories: the co-opting, erasure, and outright theft of African prophetic wisdom by the Catholic Church. This article explores the connection between the Sibyls, the first prophetess of Mami Wata, and the systematic appropriation of African prophecy—a story that reveals how colonial religion reshaped spiritual legacies.

Who Were the Sibyls? Ancient Voices of Prophecy

The term **Sibyl** refers to a prophetess in the ancient Mediterranean world, known for delivering ecstatic, cryptic predictions believed to come directly from the gods. The most famous was the Sibyl of Cumae in Italy, but ancient writers recorded Sibyls across the known world: in Persia, Libya, Delphi, and elsewhere. They were not tied to a single temple or cult; rather, they roamed or lived in caves, uttering verses that political leaders and commoners alike sought out. The Sibyls were considered the first prophetesses of the classical era—women through whom the divine spoke without male intermediaries.

The Libyan Sibyl, in particular, carries profound implications for African prophecy. According to ancient Greek and Roman sources, the Libyan Sibyl was the daughter of Lamia, a figure sometimes linked to serpentine or water spirits. She was believed to have been born in the region of Libya—northern Africa—and

her cult spread throughout the Hellenistic world. This suggests that the tradition of the Sibyl may have roots in African spiritual practices long before they were absorbed into Greco-Roman mythology and later into Christian iconography.

Mami Wata: The African Water Spirit and Giver of Prophecy

In the spiritual systems of West, Central, and Southern Africa, **Mami Wata** (Mother Water) is a powerful, often syncretic deity associated with water, fertility, wealth, healing, and prophetic knowledge. Depicted as a mermaid-like figure or a beautiful woman with serpentine attributes, Mami Wata is neither purely benign nor malevolent. She is a mediator between worlds, granting visions, divinatory gifts, and esoteric understanding to those she chooses—often women. Traditional priests and priestesses of Mami Wata serve as channels for her prophecies, transmitting messages that guide communities through crisis, transition, and moral decision-making.

The idea of a “first prophetess of Mami Wata” is not a single historical person but rather an archetypal origin figure found in various oral traditions. Among the Igbo of Nigeria, for example, the first priestess of the water spirit is said to have emerged from the river itself, carrying the first divination tools. Among the Fon and Yoruba, related spirits like *Mami Wata* or *Olokun* are

approached through female mediums who enter trance states—much like the ecstatic prophecies of the Sibyls. The parallels are striking: both the Sibyls and Mami Wata priestesses speak in tongues, deliver ambiguous warnings, and serve as oracles at the margins of established patriarchal power.

The Sibyls the First Prophetess of Mami Wata: A Lost Link?

The phrase “The Sibyls the first prophetess of Mami Wata” points toward a controversial thesis: that the Sibyl tradition itself may have originated from African water-cult prophetesses, later reinterpreted by Greeks and Romans. Some scholars argue that the Libyan Sibyl, specifically, shared attributes with African water deities—her cave near a spring, her serpentine associations, her role as a chthonic oracle. In this view, the Sibyls were not merely “pagan” figures later Christianized; they were part of a continuum of African prophetic expression that included Mami Wata worship. The theft began not with the Church but with the classical world's appropriation of African spiritual technology.

Yet the most profound appropriation occurred when the Catholic Church co-opted the Sibyls for its own religious narrative. In the Middle Ages and Renaissance, Christian theologians reinterpreted the Sibyls as gentile prophets who foretold the coming of Christ. The *Sibylline Oracles*—a collection of Jewish and Christian

writings from the early centuries CE—were attributed to the Sibyls, presenting them as monotheistic prophetesses. The famous Sistine Chapel ceiling featured five Sibyls painted by Michelangelo, including the Libyan Sibyl, alongside Old Testament prophets. The Church thus transformed these once-independent African-derived female oracles into heralds of its own messiah, stripping them of their indigenous meanings and cultic contexts.

THE THEFT OF AFRICAN PROPHECY: HOW THE CATHOLIC CHURCH ERASED AND REBRANDED

The theft of African prophecy by the Catholic Church was not a single event but a centuries-long process involving suppression, syncretism, and rewriting. During the transatlantic slave trade and colonization, Catholic missionaries encountered powerful prophetic traditions in Africa—the **Nganga** of Central Africa, the **Babalawo** (Ifá priests) of Yorubaland, the **Diviners** of the Kongo kingdom, and the many water spirit cults including Mami Wata. Instead of acknowledging the sophistication of these systems, the Church labeled them as devil worship or superstition. Sacred objects were destroyed, initiation rites banned, and prophetic lineages forcibly converted.

Yet the Church also practiced a subtler form of theft: absorption. The Virgin Mary, for instance, took on attributes of water spirits and earth goddesses in Latin America and Africa. In Brazil and Haiti, Mami Wata became syncretized with Our Lady of the Navigators or Stella Maris. The Sibyls, as mentioned, were given a place in Christian art and theology. But this was a one-way

appropriation: the African sources, the actual **prophetesses of Mami Wata**, were denied historic agency. Their prophecies were recast as premonitions of Jesus. The result is that many people today know of the Sibyls only as classical curiosities—and know nothing of the living African prophetic traditions that gave birth to, or closely parallel, these figures.

The Mechanism of Erasure

Why was it necessary to steal African prophecy? Because prophecy is power. Those who control access to divine knowledge control communities. By demonizing African priestesses and then replacing their roles with Christian saints and clergy, the Catholic Church dismantled the spiritual authority of African women. The Sibyls, who were female and autonomous, provided a useful bridge: they could be presented as “noble pagans” whose wisdom pointed toward Christianity, thereby masking the Church's violent suppression of living African female prophetesses. The “first prophetess of Mami Wata” became a silenced mother, her oracles replaced by the Catechism.

This erasure is not merely historical; it continues today. In many parts of Africa, traditional divination and Mami Wata worship are still stigmatized by Christian churches, while the same churches celebrate the Sibyls as part of the “preparation for the Gospel.” The asymmetry is stark. The Sibyls have been canonized in art and liturgy. The prophetesses of Mami Wata have been criminalized, pathologized, or exoticized in Western media.

Reclaiming the Narrative: Decolonizing Prophecy

To untangle this theft, we must recenter the African origins of prophetic practice. The Sibyls, especially the Libyan Sibyl, should be studied not only as Greco-Roman phenomena but as part of a continuum that includes the **Mami Wata vodunsi** (spirit wives), the **Kalunga** priestesses of the Kongo, and the **Malebi** (prophets) of the Lemba. Recognition of this heritage allows contemporary African diaspora traditions—Candomblé, Santería, Vodou—to reclaim their prophetic lineages as legitimate, sophisticated, and older than the Church's version of revelation.

Furthermore, scholars and spiritual practitioners alike are calling for a restitution of symbolic property: the Sibyls should be acknowledged as potentially having African ancestors, and the Church should be called to account for the ways it has misrepresented and suppressed African prophecy. This is not about dismissing the Sibyls' power in their own right—they remain fascinating historical figures—but about ensuring that the story of prophecy is not told solely through a European Christian lens.

CONCLUSION: THE UNBROKEN THREAD OF THE PROPHETESS

The narrative of **The Sibyls The First Prophetess** reveals a deeper truth: that the sacred feminine voice of prophecy has never been fully silenced. The Sibyls may have been absorbed into Christian art, and Mami Wata may have been driven underground, but both traditions survive. Today, in the revival of African traditional religions and in the ongoing veneration of Mary under her many ocean-related titles, the echo of the first prophetess can still be heard. The reclamation of this heritage is an act of spiritual justice—a way to honor those women who spoke the words of the divine, before the theft, before the occupation, before the long erasure. It is time to restore their names, their stories, and their prophecies to the center of human history.

- **Key takeaway:** The Sibyls and Mami Wata prophetesses share deep structural parallels that suggest African origins for oracular female figures.
- **Critical insight:** The Catholic Church's appropriation of the Sibyls was part of a broader pattern of stealing and rebranding African prophecy.
- **Call to action:** Support decolonized scholarship that honors the prophetic traditions of Africa and the diaspora.
